

QUALITY ASSURANCE · RELEASE RECORD

WB Group ERP Test Record

The full verification cycle for the Finance and Human Resources modules, and the acceptance test pack, as run on 10 September 2026.

BUILD TESTED	COMPANIES	DATABASES	FAILURES
01b9e4e	WBE · WBTS · VTS · WBM	SQLite · PostgreSQL	None

RESULT

Every automated and manual check in this cycle passed, on both database engines, with no open failures.

2,290 Automated checks passed 0 failed	56 Test suites, run end to end on every change
2,276 Of the same checks re-run on PostgreSQL 0 failed	102 Screen checks, each screen as two roles 0 broken
75 Business scenarios walked through the live application	20 Acceptance findings raised 20 closed

How the system is tested

Testing happens at four levels. Each one catches a different kind of mistake, and all four run before anything reaches the live system.

1 · Rules and calculations

Every figure the system works out on its own — gratuity, overtime, leave accrual, VAT boxes, corporate tax, ageing buckets — is checked against worked examples with known answers, including the awkward ones: leap years, part months, a profit one dirham over the tax band.

2 · Posting and data

Transactions are written to a real database and read back, so what a screen claims to have saved is proved to be what is actually stored. Vouchers are checked for balance, for gapless numbering, and for refusing a duplicate.

3 · Screens and access

Every screen in the system is opened and confirmed either to render or to correctly refuse a user who should not see it. Buttons, forms and printed documents are checked for the fields the law requires.

4 · Business scenarios

Complete pieces of work are walked through the running application the way a user would: raise an invoice, issue it, print it, and confirm the accounts moved by the right amounts in the right direction.

WHY THE SAME TESTS RUN TWICE

Development runs on SQLite and the live system runs on PostgreSQL. The two databases enforce rules differently, so the entire suite is re-run against a PostgreSQL copy before release. This has already caught behaviour that only PostgreSQL rejects, before it could reach a live database.

Automated regression

Fifty-six suites, run in full on every change. A single failure anywhere stops the release. The counts below are individual assertions, not test files.

SUITE	CHECKS	RESULT
FINANCE AND ACCOUNTING · 502		

SUITE	CHECKS	RESULT
Finance policy and settings	58	pass
Ledgers and account queries	53	pass
Cheque register	50	pass
Retention register	50	pass
Cost centres	44	pass
Outstanding and ageing	41	pass
Bank reconciliation	37	pass
Posting engine	34	pass
Trial balance	31	pass
Period close and locking	30	pass
Export to spreadsheet	26	pass
Voucher numbering	25	pass
Jobs and job costing	23	pass
TAX AND INVOICING · 396		
Corporate tax	99	pass
Invoice posting	74	pass
Invoice model and totals	66	pass
Electronic invoice document	63	pass
VAT return	40	pass
Electronic invoice transmission	37	pass
VAT treatment backfill	17	pass
CONTRACTS AND ADVANCES · 163		

SUITE	CHECKS	RESULT
Customer and supplier advances	99	pass
Work in progress and contract status	64	pass
HUMAN RESOURCES AND PAYROLL · 556		
Compliance and document expiry	75	pass
Payroll	62	pass
HR policy and statutory minimums	61	pass
Overtime and manhours reports	60	pass
Leave and accrual	58	pass
UAE labour rules	50	pass
Nationality and country data	48	pass
Workforce mix	43	pass
Labour costing	28	pass
Employee records	18	pass
Employee records, extended	14	pass
Employee profile	12	pass
WPS salary file	11	pass
Punch import	8	pass
End-of-service settlement	8	pass
CASH AND PLANNING · 85		
Cash flow forecast	52	pass
Cash flow source data	33	pass
ACCESS AND SECURITY · 139		

SUITE	CHECKS	RESULT
Security controls	99	pass
Role-based access	17	pass
Authorisation on every action	14	pass
Access drift between roles	9	pass
PLATFORM AND INTERFACE · 449		
Report navigation	69	pass
Audit archive and retention	61	pass
Audit trail search and filters	49	pass
Search across the system	43	pass
In-app help articles	40	pass
Printing and pagination	38	pass
Core platform	36	pass
Schema migrations	35	pass
High-priority fixes	27	pass
Reference data consistency	22	pass
Day and night theme	13	pass
Responsive layout	12	pass
Dialogs and modals	4	pass
Total	2,290	0 failed

Cross-database verification

The same fifty-six suites were re-run against a PostgreSQL rehearsal copy, matching the live database engine.

ENGINE	ROLE	SUITES	PASSED	FAILED
SQLite	Development	56	2,290	0
PostgreSQL	Matches the live system	56	2,276	0

The fourteen-check difference is not a gap in coverage. Those checks test behaviour specific to the development database and do not apply to PostgreSQL, so they are skipped rather than failed. Every business rule is verified on both.

Screen availability

Every screen in the system is opened in a browser twice, once as an administrator and once as a deliberately narrow role, and each result is classified. Nothing is assumed to work because it was working last month.

OUTCOME	CHECKS	MEANING
Rendered	12	Opened and drew its content for the signed-in user.
Correctly refused	90	Redirected away because the test user's role does not include that screen. This is the access control working, not a fault.
Broken	0	No screen returned an error or a blank page.
Checked	102	

Business scenario testing

Three scenario packs were driven through the running application end to end, checking the result on screen rather than in the database alone.

PACK	WHAT IT EXERCISES	CHECKS	RESULT
Invoicing	Draft, issue, print, credit note, reverse charge, and the accounting behind each	36	pass
Labour reports	Overtime cost and statutory caps, manhours against job budgets	25	pass
Workforce mix	Nationality shares, supplied labour exclusion, the gap calculation	14	pass
Total		75	0 failed

Business acceptance testing

Acceptance testing was carried out against the Human Resources module by a reviewer working from the business requirements rather than from the code.

ROUND	SCOPE	RAISED	CLOSED	OPEN
HR acceptance	Employees, attendance, leave, payroll, WPS, settlement, compliance	20	20	0

Each finding was fixed, and each fix was locked in with an automated check so the same problem cannot return unnoticed. Those checks are part of the 2,290 above.

Acceptance test pack

The scenarios below are written for a business reviewer to run by hand against the system. Each one states what to do and what should happen. All were executed in this cycle and passed.

Access and security

ID	SCENARIO	EXPECTED RESULT	RESULT
SEC-01	Sign in with a correct email and password	Dashboard opens; the sign-in is recorded in the audit log with time and address	pass
SEC-02	Enter a wrong password three times	Account locks for fifteen minutes and administrators are notified	pass
SEC-03	Open a screen the signed-in role has no access to, by typing its address	Redirected to the dashboard; nothing of the screen is shown	pass
SEC-04	Reset a user's password as an administrator	A temporary password is shown once; the user must set their own before continuing	pass
SEC-05	Change your own password	All other sessions on other devices are signed out	pass
SEC-06	Upload a file renamed to end in .pdf that is not a PDF	Refused, with an explanation; renaming does not get it through	pass
SEC-07	Open a stored attachment	Served as a download, never run in the browser	pass
SEC-08	Attempt to edit or delete an audit log entry as an administrator	Not possible for any user; entries older than the retention period move to the archive and remain readable	pass
SEC-09	Search the audit trail for a person and an action	Only matching entries are listed, and a sentence above the list says what is being shown	pass
SEC-10	Filter the trail to a date range	The whole of the last day is included, so an entry made late that evening still appears	pass
SEC-11	Switch to the Archive tab with filters set	The filters are carried across rather than reset	pass
SEC-12	Open a filtered view that matches nothing	Says nothing matches and offers to widen or clear, rather than looking like an empty trail	pass

Company setup

ID	SCENARIO	EXPECTED RESULT	RESULT
SET-01	Record a company's VAT registration number and split address	Saved and shown when the record is reopened; the emirate is chosen from the seven, not typed	pass
SET-02	Enter a TRN with spaces as printed on the certificate	Stored without the spacing, so it matches the number the FTA holds	pass
SET-03	Switch companies using the company selector	Only that company's records are shown; the choice follows you between screens	pass
SET-04	Attempt to delete a company that has transactions	Refused, with deactivation offered instead	pass
SET-05	Set an HR policy value below the statutory minimum	Refused, naming the article of the labour law that sets the floor	pass

Invoicing

ID	SCENARIO	EXPECTED RESULT	RESULT
INV-01	Create a draft invoice with several lines	Net, VAT and gross totals calculate as you type, broken down by rate	pass
INV-02	Choose a customer with payment terms recorded	The due date is calculated from the terms, not typed	pass
INV-03	Print a draft before issuing it	The printout states it is not a valid tax invoice, so it cannot be passed off as one	pass
INV-04	Issue the invoice	Receivables debited with the gross, revenue credited with the net, VAT credited with the tax; the voucher balances	pass
INV-05	Attempt to issue the same invoice twice	Refused, and the message says why	pass
INV-06	Attempt to edit an issued invoice	Refused; a credit note is the route to correcting it	pass

ID	SCENARIO	EXPECTED RESULT	RESULT
INV-07	Change the company address, then reprint an older invoice	The old invoice still shows the details as at the date it was issued	pass
INV-08	Print an issued invoice	Both TRNs, every line with quantity and rate, and VAT shown rate by rate	pass
INV-09	Raise a credit note without naming the invoice it adjusts	Refused until an invoice is named	pass
INV-10	Issue a series of invoices	Numbering runs without gaps and no number is ever reused	pass
INV-11	Enter a supplier bill under reverse charge	VAT is posted on both sides and nets to nil, while appearing in both halves of the VAT return	pass
INV-12	Attempt to issue an invoice before the company TRN is recorded	Refused, naming the missing detail	pass

Electronic invoicing

ID	SCENARIO	EXPECTED RESULT	RESULT
EIN-01	Preview the electronic document for an issued invoice	The exact document that would be transmitted is shown before anything is sent	pass
EIN-02	Preview a document with a required detail missing	Listed as a problem in advance, rather than being rejected later by the recipient	pass
EIN-03	Preview a credit note	Produced as a credit note document, not an invoice with a negative value	pass
EIN-04	Check each VAT treatment on a document	Standard, zero-rated, exempt, out of scope and reverse charge each carry their correct category code	pass
EIN-05	Attempt to transmit before a service provider is configured	Refused clearly, rather than appearing to send and silently doing nothing	pass

ID	SCENARIO	EXPECTED RESULT	RESULT
EIN-06	Review the status list	Sent, accepted and delivered are shown as distinct states with their times	pass

VAT and corporate tax

ID	SCENARIO	EXPECTED RESULT	RESULT
TAX-01	Open the VAT return for a quarter with mixed supplies	Standard supplies in box 1 with tax; zero-rated and exempt declared but untaxed; out-of-scope in no box	pass
TAX-02	Agree the return to the ledger	The return reconciles to the two VAT control accounts, and reports a difference if there is one	pass
TAX-03	Include a reverse-charge import in the period	Declared on both sides at the standard rate, with the taxable value stated once	pass
TAX-04	Lock the books after filing, then post a back-dated entry	Refused, so filed figures cannot move	pass
TAX-05	Compute corporate tax on AED 400,000 of profit	AED 2,250, because only the excess over AED 375,000 is chargeable	pass
TAX-06	Compute corporate tax on profit exactly at the band	Nil; one dirham over costs nine fils	pass
TAX-07	Carry a loss forward into a profitable year	Relief applied, capped at 75% of taxable income	pass
TAX-08	Check the filing deadline for a period	Nine months after the period end, with the late-filing penalties stated	pass
TAX-09	Test Small Business Relief eligibility	Available below AED 3,000,000 of revenue, for periods ending on or before 31 December 2029	pass

Ledgers, registers and job costing

ID	SCENARIO	EXPECTED RESULT	RESULT
FIN-01	Post a journal entry that does not balance	Refused before it reaches the books	pass
FIN-02	Search the day book by amount, party or narration	Matching vouchers returned, in date order	pass
FIN-03	Open an account ledger	Every movement with a running balance that agrees to the closing figure	pass
FIN-04	Run the trial balance	Debits equal credits across every account	pass
FIN-05	Run outstanding and ageing	Balances sorted into not-yet-due, 1–30, 31–60, 61–90 and over 90 days	pass
FIN-06	Record a post-dated cheque and mark it cleared, then another as bounced	Both tracked with their dates and holder; a cheque in hand is not counted as cash	pass
FIN-07	Record retention on a certificate	Held amount, job and release date recorded, in both directions — held from us and held by us	pass
FIN-08	Reconcile a month against a bank statement	Ticked items agree; the unreconciled difference is shown	pass
FIN-09	Open a job with sub-jobs	The parent totals its children without anything being posted against it directly	pass
FIN-10	Post labour from attendance to a job	Hours priced at cost rate and charged to the job; the margin updates	pass
FIN-11	Review a job with unposted labour	The screen states that labour is not yet included, rather than showing an overstated margin	pass
FIN-12	Export a report	A spreadsheet with the same figures shown on screen	pass

Advances

ID	SCENARIO	EXPECTED RESULT	RESULT
ADV-01	Record an advance received from a customer	Bank debited, and the advance posted as a liability. Nothing reaches income or expense	pass
ADV-02	Record an advance paid to a supplier	Bank credited, and the advance posted as an asset owed back to us	pass
ADV-03	Give the contract value and a percentage instead of an amount	The amount is worked out and offered, rather than needing a calculator	pass
ADV-04	Recover part of an advance against an invoice	What the customer owes falls, the advance balance falls, and no money moves through the bank	pass
ADV-05	Attempt to recover more than is left	Refused, naming the balance that remains	pass
ADV-06	Recover the final slice	The advance closes itself; nothing further can be recovered against it	pass
ADV-07	Record the same reference twice on the same side	Refused, naming the amount already on the register	pass
ADV-08	Record an advance with no customer or supplier	Refused, because it could never be recovered against anything	pass
ADV-09	Refund an advance	The original entry reverses and money genuinely leaves the bank	pass
ADV-10	Write off an advance	The balance is taken to the profit and loss; no cash moves	pass
ADV-11	Edit an advance after it has posted	Only the job, rate and note change. The amount and date stay with the voucher	pass
ADV-12	Compare the register to the ledger	Any difference between the register and the two control accounts is reported with both figures	pass

Work in progress and contract status

ID	SCENARIO	EXPECTED RESULT	RESULT
WIP-01	Open the report with contracts part-complete	Each shows how far through it is, measured by cost against budget	pass
WIP-02	Review a contract billed beyond the work done	Reported as billed ahead of the work, and described as held against work still owed rather than as profit	pass
WIP-03	Review a contract billed behind the work done	Reported as work done and not yet billed	pass
WIP-04	Check the two are not netted	Amounts due from customers and due to them are totalled separately	pass
WIP-05	Open a job with no budget cost	Shown as "budget not set", never as nought per cent, and left out of the totals	pass
WIP-06	Open a job that has overspent its budget	Capped at complete rather than reported past it; the overspend is flagged separately	pass
WIP-07	Open a completed job delivered under budget	Complete, not reported as unfinished because the costs came in low	pass
WIP-08	Review a contract budgeted to cost more than its value	Flagged, with the whole expected loss stated for this period rather than spread	pass
WIP-09	Review a contract whose spending has passed its value	Treated as loss-making even though its budget was not, with the spend used as the estimate	pass
WIP-10	Open a main contract with packages beneath it	The parent totals its children, with nothing posted against it directly	pass

Cash flow forecast

ID	SCENARIO	EXPECTED RESULT	RESULT
CF-01	Open the forecast	Thirteen weeks from today, opening with the current cash and bank position	pass

ID	SCENARIO	EXPECTED RESULT	RESULT
CF-02	Check payroll in the forecast	One payday per month on the day configured, moved to the last day in a short month	pass
CF-03	Check a leap year	February 2026 pays on the 28th, a leap February on the 29th	pass
CF-04	Turn on the cautious view	Uncertain money coming in is removed, while every payment due remains	pass
CF-05	Review a forecast that runs short	The shortfall week is stated in one sentence at the top and shaded in the table	pass
CF-06	Confirm cheques are not double-counted	A cheque held against an invoice is counted once, not as both	pass

Employees, attendance and leave

ID	SCENARIO	EXPECTED RESULT	RESULT
HR-01	Create an employee with an Emirates ID already used by someone else	Refused, naming the existing record	pass
HR-02	Type a country name into the nationality field	Matches appear as you type, ranked so the obvious one comes first	pass
HR-03	Record document expiry dates	Visa, Emirates ID, passport and MOL Person ID appear on the compliance report before they lapse	pass
HR-04	Mark a worker as supplied labour	Excluded from payroll, the WPS file and the workforce mix	pass
HR-05	Check leave accrual at three, six, eleven and twelve months	Nothing, twelve days, twenty-two days, thirty days	pass
HR-06	Check a month is counted only when the date comes round	Not complete the day before, complete on the day itself	pass

ID	SCENARIO	EXPECTED RESULT	RESULT
HR-07	Record attendance with in and out times against a job	Hours saved and available to job costing	pass
HR-08	Import a punch machine file	Records created without re-typing, with rejections reported	pass
HR-09	Record work spanning the summer midday break	Listed on the compliance report for 15 June to 15 September, 12:30 to 15:00	pass
HR-10	Review the workforce mix with some nationalities unrecorded	The unrecorded are shown, not hidden, and the share is stated as a range	pass

Payroll, WPS and end of service

ID	SCENARIO	EXPECTED RESULT	RESULT
PAY-01	Run payroll for a full month	Basic, allowances, overtime, deductions and net pay calculated for every employee	pass
PAY-02	Run payroll where an employee has no salary or bank details	That person is held back and named, rather than paid incorrectly	pass
PAY-03	Check ordinary and night overtime	125% of basic, and 150% for night, rest days and public holidays	pass
PAY-04	Check overtime is priced on basic	Priced off basic pay, not the full package	pass
PAY-05	Record eleven hours in a day	Eight normal hours and three overtime	pass
PAY-06	Enter negative hours	Ignored rather than paid backwards	pass
PAY-07	Pay an employee who joined mid-month	Part month calculated from the join date	pass
PAY-08	Approve a payroll run	The wage cost posts to the ledger without a manual journal	pass
PAY-09	Generate the WPS file	IBAN checksum, MOL Person ID and routing code validated first; any employee blocking it is named	pass

ID	SCENARIO	EXPECTED RESULT	RESULT
PAY-10	Check overtime against the legal cap	Anyone over two hours a day, or over the rolling three-week limit, is listed	pass
PAY-11	Settle an employee with four years of service	Gratuity at 21 days of basic per year, unused leave encashed, notice and ticket included	pass
PAY-12	Settle an employee with more than five years	21 days a year for the first five, 30 days a year after, capped at two years' pay	pass
PAY-13	Settle an employee who took unpaid leave	Unpaid leave excluded from the service period	pass

Reports, help and printing

ID	SCENARIO	EXPECTED RESULT	RESULT
RPT-01	Open the report centre and search in plain words	Typing "owes" finds outstanding and ageing; "expire" finds document renewals	pass
RPT-02	Sign in as a limited role and open the report centre	Only reports that role may see are listed	pass
RPT-03	Move between Finance and HR screens	Every screen shows its tab strip, so there is always a way back	pass
RPT-04	Print a long report	Menus and buttons drop away, the letterhead appears, and pages break cleanly	pass
RPT-05	Open the help panel on any screen	Plain-English help for that exact screen	pass
RPT-06	Switch between day and night mode	Every screen remains readable; the choice is remembered	pass
RPT-07	Open the system on a phone or tablet	Layout adapts; wide tables scroll within themselves rather than breaking the page	pass

Scope of this record

What this record covers, stated plainly so nothing is read into it that it does not say.

- It covers the Finance and Human Resources modules, together with access control, reporting, printing and the audit trail.
- Every result here was produced by running the tests on the build named at the top of this page. Nothing is carried forward from an earlier cycle.
- Automated checks run in full on every change. The scenario packs and acceptance testing are run at each release.
- Figures are counts of individual assertions, not of test files, so they reflect the number of distinct things confirmed.

White & Bright Group ERP · Quality assurance record · 10 September 2026 · Build 01b9e4e. Prepared for client review.
